DoD Cyberspace Workforce Definitions

- cyberspace Workforce. "Personnel who build, secure, operate, defend, and protect DoD and US cyberspace resources; conduct related intelligence activities, enable future operations, and project power in or through cyberspace. It is comprised of personnel assigned to the areas of cyberspace effects, cybersecurity, cyberspace IT and portions of the Intelligence workforces."
- cyberspace effects workforce. "Personnel who plan, support and execute cyberspace capabilities where the primary purpose is to externally defend or conduct force projection in or through cyberspace."
- cybersecurity workforce. "Personnel who secure, defend and preserve data, networks, net-centric capabilities, and other designated systems by ensuring appropriate security controls and measures are in place, and taking internal defense actions. This includes access to system controls, monitoring, administration and integration of cybersecurity into all aspects of engineering and acquisition of cyberspace capabilities."
- cyberspace information technology workforce. "Personnel who design, build, configure, operate and maintain information technology, networks and capabilities. This includes actions to prioritize portfolio investments, architect, engineer, acquire, implement, evaluate, and dispose of information technology and services; as well as information resources management, and the management, storage, transmission, and display of data and information."
- intelligence workforce (cyberspace). "Personnel who collect, process, analyze, and disseminate information from all sources of intelligence on foreign actors' cyber programs, intentions, capabilities, research and development, and operational activities."
